TITLE : ELECTRONIC MAIL SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To provide an electronic mail system in which an electronic mail described in a language at a transmitter side is translated into a language at a receiver side and the translated electronic mail is transmitted.

SOLUTION: A mail server has a mail conversion program 70 as a mail conversion means so as to use it concurrently for an automatic translation device. The mail conversion program 70 includes a main program 71 that discriminates a language used for an electronic mail, references a mail conversion table 60 and extracts the address of a corresponding translation program, a translation dictionary and a code system conversion table from the mail conversion table 60, a translation program 72, that translates a mail described in a language of a transmitter side into a language of a receiver side, and a code conversion program 74 that encodes a language code of a translated word, based on a code system conversion table 65 and decodes a code received from the Internet.
